Documents

Document	Version	SHA-256 fingerprint
Sub-processors	v2026-10-12	edbl 9862 d7e2 09e7 0273 e4e9 51d7 c939 df31 4b3e dc14 98e0 f547 eaa1 b27f 6a7f

Each fingerprint is the SHA-256 of the document's exact text as published. Anyone can check that a saved copy matches the published version, and any change to the text would change its fingerprint. The current version of each document is published at footer365.com, and every version that applied to the organisation is kept on the Agreements page of its Footer365 portal.

Sub-processors

In force from 12 October 2026

About this list

To deliver the service we use a small number of trusted sub-processors. Each is bound by data protection obligations no less protective than our data processing terms. This page lists the sub-processors that may process personal data on your behalf.

A supplier appears here only if personal data belonging to you or your users can reach it. Tools we use to build and run the product that hold no such data, such as our source code repository, are not sub-processors and are not listed.

Current sub-processors

Provider	Purpose	Location
LCN (Team Blue)	Server hosting and data storage	United Kingdom
Microsoft Graph / Exchange Online	Directory sync and mail-flow provisioning in your Microsoft 365 tenant, and delivery of our transactional email	Your own tenant's region, which is the United Kingdom for a tenant set up in the UK. Our transactional email is sent from our tenant in the United Kingdom
Microsoft 365	Our own business email and file storage, which is where correspondence with you is held	United Kingdom
Stripe	Payment processing and card vaulting	United States and India, in Stripe's data centres, handled by Stripe's companies in Ireland and the United Kingdom
Xero	Our accounting records: the invoices we raise and the payments we receive, with the company name, address, VAT number and billing contact of each customer we invoice directly and of each reseller and distributor	United States, with processing in New Zealand and Australia
Cloudflare	DNS and network security for service endpoints, and the check that a message sent through our website's contact form comes from a person	Each request is handled at the nearest of Cloudflare's data centres, in the United Kingdom for UK visitors. Logs and account data are held in the United States
NinjaOne	Server monitoring, patch management and remote administration	Germany (EU)
SentinelOne	Endpoint threat detection and response on our servers	Germany (EU)

Google Cloud (Web Risk)	Checking the web addresses used in campaigns against Google's lists of unsafe sites	Google's data centres worldwide
-------------------------	---	---------------------------------

Transfers outside the United Kingdom

Where a sub-processor holds data outside the UK, the transfer is protected. UK adequacy regulations cover the European Economic Area, which includes Germany, and New Zealand. Transfers to the United States are made under the UK Extension to the EU-US Data Privacy Framework where the provider is certified to it, and otherwise under the UK International Data Transfer Addendum to the Standard Contractual Clauses, as are transfers to any other country.

Public registers we consult

We check a VAT number you give us against the European Commission's VIES service, and we may look a company up by its company number in its country's official register, such as Companies House, or in the public Legal Entity Identifier index run by GLEIF, to confirm that it exists and whether it has entered an insolvency procedure. Only the VAT or company number is sent, and what comes back is the public record. These registers do not process personal data on our behalf, so they are not sub-processors and are not listed above.

Changes

We will update this page when we add or replace a sub-processor, and give notice as described in our data processing terms so you may object on reasonable grounds. To be notified of changes, email privacy@footer365.com.
